

# Careers in Technology

There are few technology businesses currently more critical to the global financial landscape than London Stock Exchange Group.

Our technology powers many of the world's leading financial exchanges, disseminating information and data to investors, and managing systemic risk before crises can occur. As well as supporting the Group's own businesses globally, our technology business supports more than 40 platforms around the world.

## **Our commitment to innovation**

At London Stock Exchange Group, we are committed to staying at the forefront of technological progress and innovation. Our technologists are driving many of the emerging and disruptive trends currently taking place in our industry.

As a world-class technology business we cannot afford to stand still. In the world of financial technology, change is constant, progress happens at rapid speed, and competitive advantage is measured in nanoseconds. LSEG is committed to ensuring we remain at the cutting edge of our industry, analysing and applying technological innovations across our global operations. From Artificial Intelligence (AI) to Blockchain and Distributed Ledger Technology, our technologists are ensuring we utilise these capabilities to shape the future of financial services, improving efficiencies, reducing risk and creating new business models.

## **Our Technology programmes**

As a member of LSEG's Technology stream, you'll have an important role in harnessing new, disruptive technologies and working on projects aimed at integrating these into our frontline operations. The roles you undertake will depend on your background and interests, and on the needs of the business. You could be helping to enhance our existing IT infrastructure, for example, or developing

the next generation of software and applications to drive our business forward. Equally, as a technology project manager or business analyst, you'll play a key role in helping us to shape our long-term technology strategy, helping to build client relationships and to integrate new companies and product lines into our core business. Wherever your graduate or internship programme takes you, you can expect constant opportunities to develop your skills and knowledge along the way.

No two experiences are alike. Our graduate programme is designed to provide exposure to different areas of our global business, and, over the course of two rotations in 12 months, you'll come to understand exactly how technology underpins the different aspects of our work. You could find yourself supporting the Group's world-class financial exchanges and post trade operations, or driving our rapidly expanding indexing and benchmarking business. We're looking for highly motivated individuals from a Science, Technology, Engineering or Maths (STEM) background with a demonstrable interest in technology to join our graduate and internship schemes.

## Our recruitment process

Both our graduate and internship programmes share a consistent recruitment process. If you require any reasonable adjustments at any stage, please contact our team.

- 
- Stage 1** Apply online, submitting your CV and a short motivational statement
- 
- Stage 2** Complete our online reasoning test
